1. Document Purpose

The scope of this document is to guide users on how to create dashboards using a Web-Service connection. It is recommended that users follow the step-by-step process given below.

2. Prerequisites

- 2.1. Software
 - Browser that supports HTML5
 - Operating System: Windows 7

2.2. Basic understanding of the BizViz Server

3. Step-by-Step Process

3.1. Login to the Portal

- i) Enter in the URL bar http://www.bdibizviz.com/app/
- ii) Enter your credentials to Login

ii) After Selecting 'Dashboard Designer', a web page will open in a new window.

- iii) Click on the '**New +**' drop-down menu as shown above. You will be presented with 2 options:
 - Workspace: A folder that is used to contain dashboards
 - Dashboard: A canvas used for dashboard design and development
- iv) Click on 'Dashboard' to create a new dashboard (as show below)

v) After selecting 'Dashboard' a canvas (blank working area) will open.

- vi) Click on '**Data source**' icon provided on the right side of the canvas, and view the data connectivity options (ex: CSV, Excel, and Web-Service)
- vii)Click on the + icon next to the desired connectivity option, to create a new connection.

CSV Excel	+	Name :	Sample		
		Data Sources :	IPL2015	▼	
Webservice	+	Services :	Top_Fours	•	
Sample	Ē	Load At Start :	Yes	No	
		Timely Refresh	Yes	No	
		Field Set	Condition	Script OnLoad	
		Field			
		playersfour		500 1	
		four			
		Calculated Field Ed	124		

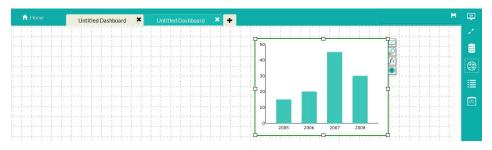

viii) Fill in the necessary details

- Name: Name the connection
- **Data Sources**: Select a Data Source from the list (all the data-sources available in Data-Management will be listed here)
- Services: Select a query from the list (all the queries available for the selected Data Source will be listed)
- Load at Start: Enabling this option refreshes the data-source before opening the charts
- Timely Refresh: Data will be updated periodically
- Field Set: Fields available in the uploaded file will be displayed
- **Condition**: Fields that can be used as filters in the query will be displayed here. The user should enable the check box next to any field he wishes to use as a filter, and enter the desired value for that filter within the '**Condition**' box.
- Script on Load: Scripts can be written to trigger particular functions when the chart is opening the dashboard.

ix) Click on the '**Charts**' 📴 icon provided on the right side of the canvas.

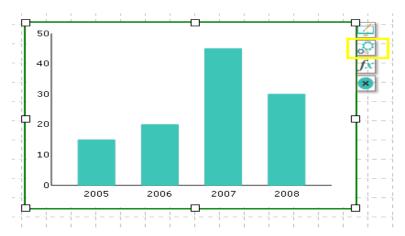

A list of the available components will be displayed. Drag and drop the Column Chart component onto the canvas

x) Connect the Column chart component to an existing data connection:

• Click on the settings icon that appears next to the chart, as shown below.

• Select a connection from the 'Available Connections' dropdown.(Ex: Sample)
